

Christopher B. Crawley

*Technology Recruiter
Google, Incorporated*

Christopher Crawley, a software engineering recruiter for Google, Incorporated, is committed to formatting staffing strategies that identify technology talent, maintaining the company's culture of individuality and excellence, and empowering its employees to continue providing the dynamic product and level of service for which Google has long been known.

He does this by removing systemic barriers that hinder diverse candidates from entering into engineering positions, especially those involving the company's mobile apps and Chrome teams. He also applies considerable efforts to making sure current Google employees are connected with communities that are not as well represented across its current employee population. In short, he spearheads multi-group initiatives that recognize, draw, and retain engineers.

Be it his internship, the technical recruiting, to the account manager positions he has held, Mr. Crawley's employment experience has been a steady progression of increasing exposure and accountability. Prior to his current position with Google, Mr. Crawley spent over 10 years at TEKsystems, a globally focused, Atlanta-based, executive search firm. Like the company, Mr. Crawley is driven toward innovation by owning change.

Mr. Crawley's sensibilities for what it takes to bring the best to the best have been honed through the selective career choices he has made, the undercurrent of which stems from his keen ability to identify and engage stellar candidates, then merge their skill sets and talents with the appropriate IT systems and processes. The end result is a level of content, products and services that meet, if not exceed, corporate standards and goals. He is also a subject matter expert in the fields of resource planning, market statistics, healthcare IT, network development, security and infrastructure.

Born in Philadelphia, Pennsylvania, Mr. Crawley attended Chestnut Hill Academy. After graduation, he went on to attend Georgia Institute of Technology, where in 2004, he graduated with a degree in business management.

Currently residing in San Jose, California, with his wife, Aneesa, Mr. Crawley is a track and field enthusiast, enjoys theater, gaming, shotokan karate, as well as food and wine festivals. He remains actively involved in his fraternity, Kappa Alpha Psi, Incorporated's functions and affairs, especially those events that connect students with technology, wherein he advises how they can position themselves for IT opportunities. Additionally, he volunteers his experience for veteran and student athlete career-coaching workshops. ■
